

Fresh, Clear, Glowing Skin. Is it just a dream for over 35s?

elōs presents brand new technology using Radio frequency and Light energy for the treatment of a variety of skin and body conditions. *By Viv Christianson*

Women around the world want quick and easy solutions for looking younger so it's no wonder that face lifts are no longer in the top five plastic surgery choices. In fact, in the last two years so many effective anti-aging and skin rejuvenation treatments have been introduced that now only the most extreme facial skin flaws need surgery.

elōs technology uses a combination of radio frequency and light energy to treat a variety of skin and body conditions with effective results. Equipment using this system is now available at a growing number of medical aesthetic practices and skin care clinics in South Africa.

Here's what elōs technology can do for you:

Skin Tightening with Refirme™

One of the most desired facial treatments is Refirme™ skin tightening, recently featured on E! News as one of the top celebrity treatment choices. elōs Refirme™ treatments can soften fine lines and wrinkles, allowing the skin to contract at the same time, creating a fresher more youthful look. The infra-red energy homogeneously increases the temperature of the dermal components, such as connective tissue and blood vessels. Subsequently, RF energy is attracted to these areas of heat, leading to the synthesis of new collagen and resulting in a tighter appearance of the skin.

A total of five treatments is recommended at bi-weekly intervals.

For more information visit www.refirme.com

Skin Rejuvenation

- The texture of the skin is revitalised.

- The appearance of fine red spider veins, found mainly on the nose and cheeks, is reduced.
- Various pigmentation marks often caused by exposure to the harsh African sun, are reduced.
- Enlarged pores are improved.
- Scarring and discolouration of the skin is improved.
- The chest and the hands can also be treated for these conditions.

Five treatments are recommended at monthly intervals.

Permanent Removal of Excess Body & Facial Hair

elōs effectively eliminates unwanted hair from all skin types including tanned skin. Unlike other systems, elōs does not rely solely on chromophore targets for effectiveness, making treatment "colour-blind". This enables clients to eliminate unwanted hair regardless of skin type or hair colour.

Eight – 12 treatments are needed, depending on the texture of the hair and the size of the area to be treated.

Treatment of Active Acne

elōs technology reduces the production of oils in the sebaceous glands and destroys the bacteria that accumulates in the pores. Skin will look less inflamed and will heal faster.

Ten treatments are recommended, two a week and followed with monthly maintenance treatments.

Treatment of Cellulite with VelaSmooth™

Cellulite treatments with elōs, powered VelaSmooth™, results in more tightened skin and the body becomes smoother and more contoured. VelaSmooth™ recontours body shape and smoothes the dreaded cottage cheese appearance. Much more than massage therapy, VelaSmooth™ penetrates deep into the sub dermal layer to attack fat tissue on the cellular level. It shrinks fat cells and restructures the area surrounding the septae. It is the only FDA approved treatment for cellulite.

Twelve treatments are recommended, two per week. Patients over 40 may require a total of 16 treatments. Monthly treatments will ensure that the results are maintained. For more information and treatment locations visit www.velasmooth.co.za

elōs technology powered VelaSmooth, estyle, eight, elaser and elax systems are now available in South Africa.
